ProfiSeal to Attend NEVA 2019 in St Petersburg

ProfiSeal will be attending the NEVA 2019 exhibition in St Petersburg, Russia.

The NEVA event is the premier B2B platform for international companies to access and benefit from the opportunity of Russia's maritime industry boom.

The 15th annual international exhibition and conference for shipping, shipbuilding, offshore energy and ports will be taking place on 17-20 September at the Expoforum in St Petersburg.

ProfiSeal designs and manufactures highly reliable propeller-shaft and bulkhead seals for the shipbuilding and yacht industry. The company is well known for customized solutions made to order in an excellent quality and with a reasonable lead time.

In 2015 ProfiSeal has invented the first fire-resistant bulkhead seal A60, which gives the customer a technical solution for protection against fire at the machine room bulkhead. Installations were made for RoRo and RoPax Ferries in Germany and Korea, for polar cruise ships in China, for LNG tankers in Singapore as well as for petroleum barges and ferries in the USA. In addition, mid-size coast guard and customs vessel have been equipped with the new bulkhead seals.
